2025/10/27 12:30 1/2 Peering Resources

# **Peering Resources**

(UPDATED)

The section of the Toolbox dedicated to listing useful Peering Resources

Some are described elsewhere in the Toolbox, others have a short description included here for completeness. As ever, please consult the respective websites for more information.

### The Peering Database

The Peering Database is described elsewhere in the Toolbox

#### The IXP Database

The IXP Database is an authoritative, comprehensive, public source of data related to IXPs. It collects data directly from IXPs through a recurring automated process. It also integrates data from third-party sources in order to provide a comprehensive and corroborated view of the global interconnection landscape.

## **IXP Manager**

IXP Manager is a management platform for Internet eXchange Points (IXPs) including an administration and customer portal. It provides end to end provisioning as well as both teaching and implements=ing best practice.

## **Peering Manager**

Peering Manager is an open-source BGP session management solution designed with features and simplicity in mind, allowing engineers to track, maintain and configure BGP sessions from a centralised management point without the usual tedious manual provisioning task.
